

PDF Compressor

What is Foxit PDF Compressor?

Foxit's PDF Compressor software provides businesses with fast, high-accuracy OCR equipped with the industry's best document-to-PDF conversion automation capabilities. The software converts paper, scanned images, and born-digital content such as emails and Microsoft Office documents to text-searchable, compressed, fully optimized PDF and PDF/A files.

Unlike competitive solutions, Foxit's PDF Compressor is designed efficiency-first, with more features focused on automation, reducing unnecessary processing, and accelerating high-volume document conversion than any other product. These additional features support faster business processes, facilitating improved customer satisfaction and enabling new revenue generation while lowering manual processing costs.

PDF Compressor is ideal for organizations who need to convert thousands or millions of documents per year for archiving, compliance, accessibility, and for optimizing customer experience and core business process efficiency. The solution is flexible enough to work well on backlogs of documents sitting in a repository (or that old warehouse, yikes!) as well as digital transformation of documents coming from your ongoing business processes.

OCR and Document Conversion Use Cases

- ▶ **Paper to Digital- OCR, Compress, and Convert to PDF and PDF/A**
 - ▶ Cut download time in half with compressed files. Create searchable PDFs quickly and accurately.
 - ▶ Reduce on-premise and cloud storage costs by 50%.
- ▶ **Document Archiving with PDF/A**
 - ▶ Mitigate compliance risk. Convert to any ISO-compliant PDF/A subtype.
- ▶ **Accessibility with Auto-Tagging PDF Files**
 - ▶ Tag unstructured documents automatically, including scanned images. Create more accessible PDFs.
- ▶ **Enterprise-Ready Design**
 - ▶ Mass processing and scalability. Easy deployment and integration into existing workflows. Flexible licensing.
- ▶ **Born-Digital to PDF**
 - ▶ Convert email, Microsoft Word, Excel, PowerPoint, HTML, and more to PDF with efficient OCR text layer handling.
- ▶ **Digital Transformation**
 - ▶ Improve customer experience. Optimize ongoing document processes. Execute backfile conversion. Standardize your repository.

PDF Compressor Software Features

Reduce Storage Costs by 50% with Leading Document Compression

The software boasts unparalleled, industry-leading document compression that efficiently and correctly compresses paper and scanned image documents. PDF Compressor reduces black & white image document file size by up to 10x. For color image documents, our leading MRC compression can minimize file size by as much as 100:1.

Organizations with large document repositories can use our state-of-the-art document compression technology to reduce on-premise and cloud storage costs by up to 50%. For organizations with a larger proportion of scanned documents and image files, this number can be even greater. Document compression is effective for reducing server load and managing paid storage space in third-party applications such as in email archiving and for document storage in a CRM like Salesforce.

Batch Conversion and Multi-Threading for High-Volume Processing

With batch OCR and conversion, users can queue processing for numerous documents at one time, a much more effective high-volume alternative to basic PDF editors and free online tools which typically only support one-at-a-time conversion. Further, when enabled multi-threading allows users to process documents simultaneously (i.e. two cores process two documents at once, 32 cores process 32 documents at once) for highly scalable and stable document conversion workflows, up to billions of pages per year.

Generate New Revenue with Faster Document Processes

PDF Compressor converts paper and electronic documents to optimized PDF. The software reduces manual exception handling time in capture processes with an expansive list of supported input file types, including CAD drawings and special types of PDF such as XFA PDF forms and hybrid PDFs. The ability to ingest more documents successfully helps push more documents through your processes quickly. This positions your organization to respond to market opportunities more rapidly and improve customer satisfaction by providing faster response times.

For example, the financial institution that can approve a loan the fastest has a higher chance of winning the business. By being able to push more documents through its automated workflows without kicking out exceptions or corrupting important data, the bank can approve the loan and respond to the customer more quickly, beating competitors to the punch in the process. As a bonus, less exception handling means lower process costs and less manual involvement.

Convert Scanned Documents to Optimized PDF

Convert scanned documents in image formats such as TIFF, JPEG, and PNG into optimized PDF files. By creating documents that are highly compressed, searchable, and more accessible, your organization can create faster, more efficient document processes.

For example, Foxit's industry-leading document compression cuts download time in half for bloated image documents. This facilitates faster communication with customers and helps to improve satisfaction. In addition, compressed documents are easier to work with for remote workers accessing them on mobile devices or pulling documents from the cloud.

Paper to Digital input types supported (including common variations):

- ▶ TIFF to PDF
- ▶ JPEG to PDF
- ▶ JPEG 2000 to PDF
- ▶ PNG to PDF
- ▶ PDF to searchable PDF
- ▶ GIF to PDF
- ▶ BMP to PDF
- ▶ PNM to PDF

Create Accessible, tagged PDFs from Unstructured Documents Automatically

Create more accessible documents with advanced PDF auto-tagging. PDF Compressor can automatically create tagged PDF files from unstructured, scanned documents in addition to structured, electronic records.

Scanned documents are particularly difficult to tag for accessibility. Foxit PDF Compressor's auto-tagging feature can help government agencies spend less time manually tagging documents to create more accessible materials.

Faster and More Accurate Born-Digital Conversion

Convert digitally born documents, such as email and Microsoft Office, to PDF faster and more accurately with born-digital auto-detection. PDF Compressor will uniquely detect pre-existing text layers in born-digital documents and bypass the OCR phase, improving system performance, reducing unnecessary exception handling, and avoiding exposure to re-recognition errors that other solutions subject your workflows to.

Unattended auto-processing of born-digital assets means that electronic documents do not need to be separated from image documents in your workflows. Without coding, professional services engagements, or additional resources, Foxit's PDF Compressor automatically detects and treats born-digital documents more efficiently.

Born-Digital to PDF input types supported (including common variations):

- ▶ Microsoft Word to PDF
- ▶ MS Excel to PDF
- ▶ MS PowerPoint to PDF
- ▶ MS Project to PDF
- ▶ MS Visio to PDF
- ▶ Email to PDF
- ▶ Zip to PDF
- ▶ HTML to PDF
- ▶ OpenOffice to PDF
- ▶ Text (.txt) to PDF

Touchless, Automated Document-to-PDF Conversion

Foxit's PDF Compressor lowers processing costs by replacing manual processes with touchless document-to-PDF conversion. The software is designed with more features built around simple, automated document processing than any other solution, including:

- ▶ Intuitive job ticketing
- ▶ Watch folders
- ▶ API
- ▶ Command-line interface
- ▶ Unattended Windows service

Inside the interface, users can manage conversion processes all from one screen and prioritize different workflows quickly and easily. This streamlines process costs and promotes a healthy bottom line within your department and for your organization.
